SUMMARY

Full stack engineer with 2.5+ years building production SaaS and AI-driven systems end to end — Django/DRF and React, with hands-on experience in RAG pipelines, LLM tool-calling agents, and cloud deployment across AWS, Vercel, and Cloudflare. Comfortable owning architecture decisions independently, from database design to production debugging.

TECHNICAL SKILLS

Languages: Python, JavaScript

Backend: Django, Django REST Framework, Flask, Node.js/Express.js

Frontend: React.js (Vite), Tailwind CSS, Shadcn/Basecoat UI, HTML/CSS

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLite

Cloud & DevOps: AWS, Azure, Docker, Vercel, Render, Cloudflare Workers, Supabase, Firebase, Neon

AI & Automation: LLM tool-calling, RAG pipelines, vector stores, Celery, n8n, Zapier

EXPERIENCE

Software Developer, AI Systems — Bheemverse Innovations

Jan 2026 – Jul 2026

- Built a WhatsApp-based Retrieval-Augmented Generation (RAG) agent to automate customer conversations with contextual, knowledge-grounded responses.
- Developed an AI-powered voice calling system with tool-calling integration and a live call monitoring dashboard for real-time oversight.
- Designed CRM architecture for lead and customer lifecycle management, feeding a real-time WhatsApp webhook ingestion pipeline built on Redis and Celery.
- Implemented vector store-based memory for multi-turn conversational context and built business insight/reporting features from CRM and conversation data.

Web Developer / Tech Support — LifePlannerStudies & Opportunities

Nov 2024 – Dec 2025

- Built and maintained responsive web applications end to end using Django, Django REST Framework, and React.js, including models, views, templates, and API design.
- Applied OOP principles across class-based and function-based views to keep a growing codebase maintainable.
- Used Docker and Podman for containerized development and Git for version control across the team.

Web Developer — Explore Wings

Mar 2024 – Oct 2024

- Contributed to web development projects using Python/Django and JavaScript, supporting front-end and back-end feature work.

Python Full Stack Intern — Inmakes Infotech

Oct 2023 – Jan 2024

- Completed a full-stack development internship covering Django, REST APIs, and front-end fundamentals.

PROJECTS

Nurturely — Multi-Module SaaS Business Suite (Desktop Only) — Personal Project

- Built a SaaS business suite spanning CRM, HR, invoicing, and accounts with role-based access control and bulk operations at 50k+ record scale.
- Resolved production issues including N+1 query optimization and deployment/database configuration across multiple hosting environments.

Code (Frontend): <https://github.com/rishebss/suite-frontend>

Code (Backend): <https://github.com/rishebss/suite-backend>

SNEAKET — AI-Powered Sneaker E-Commerce Platform — Personal Project

- Built a conversational shopping assistant using LLM function-calling to search products, manage cart actions, and handle gated checkout confirmation.
- Architected an agent pipeline combining a React frontend, Django backend, and a Cloudflare Worker as an LLM proxy layer.

Code (Frontend): https://github.com/rishebss/sneaket_frontend

Code (Backend): https://github.com/rishebss/sneaket_backend

Studio Admin Panel — Dance Studio Management (Desktop Only) — Client Project (F.I.F.A.C)

- Built a comprehensive admin dashboard for a dance studio covering lead management, student tracking, attendance, and integrated payment processing.
- Implemented a dual-environment architecture — React/Express.js for the authenticated dashboard, and Python/Django for secure payment gateway operations — both backed by Firebase.
